

ERIC V. MAGTO

BACHELOR OF SCIENCE IN COMPUTER SCIENCE

☎ +63 943 838 9183 | ✉ eric.magto@outlook.com | 🌐 linkedin.com/in/eric-magto

Data science researcher and project manager. Co-founder of Raykan Technologies; faculty at University of San Jose–Recoletos.

EDUCATION

University of San Jose – Recoletos

BS in Computer Science

2012–2017

RELEVANT COURSEWORK

- Artificial Intelligence
- Data Science & Analytics
- Software Engineering & Design
- Research Methods in Computing
- Natural Language Processing
- Technopreneurship

ACHIEVEMENTS

- 2019** ● Grand Champion Mentor, 15th SWEEP Innovation and Excellence Awards (CarSpace)
- 2012** ● Deans List

LANGUAGES

ENGLISH PROFICIENT
FILIPINO NATIVE

CERTIFICATES

Certification: Philippine Information Technology General Certification Examination (Phil-IT GCE)

WORK EXPERIENCES

Operations Manager, Raykan Technologies

2019 – Present

- Co-founded Raykan Technologies, driving innovation in IT and AI solutions.
- Supervised 4 projects until its completion.
- Promoted Raykan's expertise in IT managed services and custom software development, contributing to business growth

College Faculty, University of San Jose – Recoletos

2017 – Present

- Handled research subjects under the bachelor's degree on computer science and was assigned as project coordinator.

Project Manager, Payruler

2018 – 2022

- Led 3 AI research projects from concept to proof-of-concept and IP submission.
- Managed full lifecycle: requirements, design validation, resource coordination, and milestone tracking.

ACADEMIC PROJECTS AND TRAININGS

Research Presentation: "Automatic Recognition of Music Emotion on the Lyrics using Multinomial Naïve Bayes

- 2nd Recoletos National Research Journal (2018)
- 14th PSITE – 7 Regional Convention (2018)
- 15th National Conference of Information Technology Education (2017)

Conducted research on automatic music mood recognition using Multinomial Naïve Bayes, analyzing 350 songs across 14 mood categories through lyric-based features. Achieved 54% classification accuracy, demonstrating the potential of text-driven emotion detection in music information retrieval and highlighting preprocessing challenges such as stemming and stop-word removal.
